Westralian Gas and Power Limited Quarterly Activities Report for the Quarter Ended 30 June 2010

ONSHORE PERTH BASIN PROJECTS

Perth Basin Onshore

Phase two of the Koorup Road # 2 test program has now been completed with the recording of a number of anomalous gas readings being recorded from the zone around 333 metres. This data is now being assessed by independent specialist coal seam gas testing company Geos Mining Australia in Sydney prior to moving to the next phase of testing.

Westralian Gas and Power Limited will await the outcome these studies prior to the drilling of the Koorup Road # 1.

Eneabba DR 11

During the quarter, the Company completed its studies of previous exploration efforts and has lodged its application to record a seismic survey with the DEC and DMP. The Company understands that ministerial approval is due in the near future.

OFFSHORE PERTH BASIN

The Company is now in the process of planning a new 3D seismic survey in the vicinity of Warnbro #1 where logs indicate the likely presence of hydrocarbons. The Company is receiving quotations for this work.

KENTUCKY

It appears that the international oil price continues to stabilise and this has added more confidence that the Company will be able to attract a joint venture party or an outright sale of its leases.

Ongoing studies of the leases have prompted a re-assessment of the gas potential for the area and the possibility of a significant gas-shale opportunity approximately 20 kilometres to the east of the Company's present operations. The studies will be ongoing.

The Company delivered over 120 barrels of oil to the refinery in June in line with its aim to meet the monthly overheads from production.
